Abstract

The growth of the retail business in Indonesia shows a significant number. In this case, requires retail companies to be able to meet customer needs and adjust customer desires so that the company must be able to detect what the market needs and desires of consumers. Therefore the presence of METRO Department Store is very influential in the development of the retail industry, especially in Surabaya. This research is intended to analyze the effect of the Store Attributes variable on Perceived Relationship Investment, Perceived Relationship Quality and Attitudinal Loyalty of METRO Department Store customers in Surabaya. The sample used in this study were men and women, aged 18-60 years who lived in the city of Surabaya, a total of 145 respondents who had visited and purchased at METRO Department Store, had used products purchased at METRO Department Store, were active members, and who know about post-purchase services at METRO Department Store. For processing and analyzing data in this study using SPSS 22 as a software to process data. These empirical findings indicate that the relationship between Post Transaction Service has an effect on Perceived Relationship Investment with a regression coefficient of 0.120, Direct Mail has an influence on Perceived Relationship Investment with a regression coefficient of 0.115, Interpersonal Communication has an influence on Perceived Relationship Investment with a regression coefficient of 0.138, Preferential Treatment has an influence on Perceived Relationship Investment with a regression coefficient of 0.104, Store Atmosphere has an influence on Perceived Relationship Investment with a regression coefficient of 0.164, Merchandise has an influence on Perceived Relationship Investment with a regression coefficient of 0.497, Perceived Relationship Investment has an influence on Perceived Relationship Quality with a coefficient regression of 0.658, and Perceived Relationship Quality has an influence on Attitudinal Loyalty with coefficient regression of 0.505.

Key Words: *Post Transaction Service, Direct Mail, Interpersonal Communication, Preferential Treatment, Store Atmosphere, Merchandise, Perceived Relationship Investment, Perceived Relationship Quality, Attitudinal Loyalty*

1. Introduction

The economic growth of a society will have an impact on increasing purchasing power and at the same time stimulating the market. The increase in people's purchasing power is usually triggered by higher income derived from the salary or income of a family or community group. This high purchasing power will directly or indirectly encourage the emergence of markets and shopping centers, as a means of carrying out transactions between sellers and buyers. The presence of modern shopping centers in big cities is an indicator of economic growth. (Soliha, 2016) The growing development of the retail industry in Indonesia has made the competition among companies in the industry getting tougher. The retail business is a type of business that requires a large amount of capital, but the developments that occur in this business do not only depend on the availability of

capital, but also a shift in patterns and lifestyles in society. The definition of retail is all business ventures that directly direct their marketing capabilities to satisfy end consumers based on the organization of selling goods and services as the core of distribution (Gilbert, 2014).

Retail is an important chain in the distribution process of goods and is the last link in a distribution process. Through retail, a product can meet directly with its users. The retail industry is defined here as an industry that sells products and services that have been added value to meet the needs of individuals, families, groups or end users. The products sold are mostly household needs (Utami, 2010). The retail business in Indonesia itself can be classified into two major groups, namely modern retail and traditional retail. Modern retail is basically an expansion from traditional retail. The modern retail paradigm is a view that emphasizes retail management using a modern approach where the concept of retailer management is emphasized from the point of view of meeting the needs of consumers who are the target market (ilmuritel.com, downloaded on May 20, 2020).

The retail business is generally divided into two categories, namely traditional retail and modern retail. Basically, modern retail is a retail format that stands along with the development of the economy. Modern retail is a format for selling places that evolved from traditional markets. Modern retail was already established in Indonesia in 1962 to be precise. However, this modern retail did not really develop until the 1990s, marked by the establishment of various shopping centers and the entry of a foreign retailer from Japan to Indonesia. In general, the modern retail format takes many forms, adjusted to the conditions in a region, both preferences and income levels. As time goes by and the times continue to change, this modern retail format is still developing from time to time. However, in general, the retail business format which is currently growing rapidly in Indonesia is divided into four major formats, namely hypermarkets, supermarkets, minimarkets or convenience stores, department stores, and specialty stores, where the main characteristic difference lies in the area of space and product variations. offered (elmodista.com downloaded on May 20, 2020).

The presence of modern retail offers convenient shopping activities, with various modern facilities such as escalators / escalators, spacious, comfortable and air-conditioned shopping rooms, as well as the availability of various necessities, so that visitors are comfortable and satisfied. This causes modern retail, apart from being a place to shop, also a place of refreshment for some people, and attracts visitors. The retail industry which is growing rapidly these days is a result of the increasing variety of products that are packaged and arranged in a more attractive manner, and also the consumer's need for goods has increased both in quality and quantity. This opportunity is captured by foreign investors who are aggressively building retail networks in big cities in Indonesia. The rapid development of modern retail has also occurred in the city of Surabaya, with the increasing number of large retail companies building their retail networks such as Carrefour, Matahari Department Store, Metro Department Store, and others.

2. Litterature Review

2.1 Theories and Hypotheses

2.1.1 Post Transaction Services

Research by Martin et al. (2015) show that as the number of competitors increases, customers will be offered so many options that cause them to demand services that are more than just a typical shopping experience. Post transaction service is one of the advantages of store services that are usually offered. Therefore, Martin highlighted this additional after service will affect the impression of customers on the store. A positive impression can strengthen the relationship between the customer and the store.

H1: Post transaction service has a significant effect on perceived relationship investment for METRO

Department Store customers.

2.1.2 Direct Mail

Direct mail is the main element of direct marketing media used by more than one third of direct marketing expenditure in countries (DMA, 2011). Therefore increasing the maximum use of direct mail to improve customer relations can be done through segmentation and targeting, also timing and sorting and by identifying the appropriate number of letters to subscribers. In a study by Merisavo and Raulas (2004), direct mail is defined as a marketing tool to increase the frequency of purchases from customers. In addition, the higher the frequency with which customers respond to messages, there is the potential for a greater increase in customer purchases. Thus, direct mail has a positive effect on perceived relationship investment.

H2: Direct mail has a significant effect on perceived relationship investment for METRO Department Store customers.

2.1.3 Interpersonal Communication

In the research of Mavondo and Rodrigo (2001), interpersonal communication is a social bond which is considered as the main antecedent or direct and indirectly important relational output in creating customer perceptions about the store. Relational output refers to customer commitment, trust, and cooperation. Interpersonal communication affects customer to company, customer to employee and customer relationships with customers expressed in the form of customer satisfaction (Rawlins, 1992). Glemmler et al., (2001) describe interpersonal communication as the key to a strong store-customer relationship. By creating intimacy between the customer and the salesperson, developing a personal connection through the services displayed by the salesperson. This effort will generate a sense of trust in the store's quality and integrity.

H3: Interpersonal communication has a significant effect on perceived relationship investment for METRO Department Store customers.

2.1.4 Merchandise

In a study conducted by Walsh et al. (2011) there is an impact of merchandise on perceived relationship investment which is expressed through customer satisfaction and loyalty. Customer consideration is placed on the value of an item in terms of price and quality (Baker, Parasuraman, Grewal, & Voss, 2002) where the customer decides whether it is valuable enough to purchase the merchandise itself. In Lee's (1998) study of gasoline quality (merchandise quality) towards gas station loyalty (store loyalty), he explained that the quality of merchandise not only creates customer satisfaction, but contributes to the development of customer loyalty relationships.

H4: Merchandise has a significant effect on perceived relationship investment for METRO Department Store customers.

2.1.5 Preferential Treatment

Preferential care is designed for the shop's own regular customers, mostly defined as members. Save the usual loyalty programs created as their own in keeping in touch with "members". Yi and Jeon (2003) defined the concept of customer loyalty as they involve the customer loyalty program and brand (company) loyalty program. In addition, the customer loyalty program is described as a positive attitude towards the benefits of the loyalty program. Preferential treatment will build long-term relationships with customers due to store relationships by offering additional benefits to some customers (Hennig-Thurau, Gwinner, & Gremler, 2002).

H5: Preferential treatment has a significant effect on the perceived relationship investment of METRO Department Store customers.

2.1.6 Store Atmosphere

In a study conducted by Spena et al., (2012), it is stated that the interaction between customers and store atmosphere creates a psychological impact on customer experience and perceived relationship investment, which is referred to as the relationship construction between customers and stores. Another study was also conducted by Levy and Weitz (2012) which explained that store atmosphere, which means how to communicate messages through lighting, music, aroma, decoration and layout, can stimulate customer perceptions through responses and purchases based on emotional behavior. Ismail (2011) states that store atmosphere, service, service quality, and price significantly affect perceived relationship investment. The perceived store atmosphere greatly affects the relationship between customers and stores, therefore increasing the store atmosphere will significantly affect the perceived relationship investment.

H6: Store atmosphere has a significant effect on perceived relationship investment in METRO Department Store customers

2.1.7 Perceived Relationship Investment

Investing time, effort, and resources in building relationships to generate feedback from consumers (Blau, 1964). The thing that is expected to return from customers is a positive perception of perceived relationship investment. Added, Sahin et al. (2016) believe that communication efforts in building relationships affect relational construction by having a positive relationship quality between perceived relationship investment and perceived relationship quality. Research conducted by Kang and Ridgway (1996) explains that perceived relationship investment creates an indirect psychological impact on customers where customers are required to give back their investment in the relationship. Added, Sahin et al. (2013) suggest that relationship-building efforts help assess relationships and develop subsequent behaviors.

H7: Perceived relationship investment has a significant effect on perceived relationship quality for METRO Department Store customers

2.1.8 Perceived Relationship Quality

According to Sanchez-Franco et al., (2009), perceived relationship quality combined with the intention of customer behavior to commit to produce attitudinal loyalty. Because the quality of the relationship represents the interaction between the customer and the store. Research also conducted by Huntley (2006) found that there was a direct impact on the willingness to provide recommendations to others based on perceived relationship quality. Behavior that is shown in having commitment and providing recommendations is defined as attitudinal loyalty. Perceived relationship quality is believed to be a combination of three primary dimensions: trust with stores, satisfaction with stores, and commitment to sustainable relationships (Dorsch, Swanson, & Kelley, 1998).

H8: Perceived relationship quality has a significant effect on attitudinal loyalty to METRO Department Store customers.

2.2 Research Model

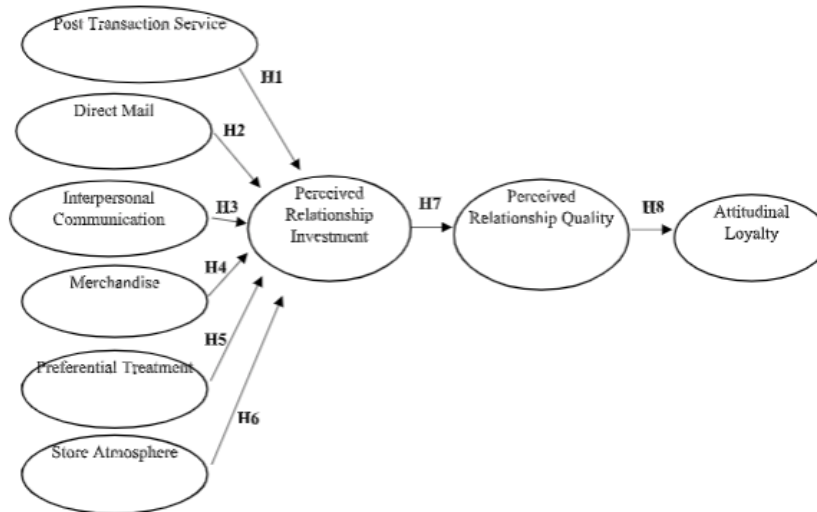

Figure 2.1: The Framework of Research Model

3. Research Methods

This research is a causal research, because it is used to develop a previous research model to test the research hypotheses that are determined based on literature review to answer the problems identified in the previous chapter. The research method used in this research is quantitative method, where this method is a scientific approach to managerial and economic decision making. The quantitative method is used because the results of the analysis can be obtained accurately when used according to the rules, can measure the interaction of the relationship between two / more variables and can simplify the reality of complex and complicated problems in a model (Syamrilaode, 2011). This research uses primary data and secondary data. Primary data is data obtained directly from respondents' answers, direct observation of events and objects (Sekaran, 2003), and is used to specifically address research problems (Istijanto in Sunyoto, 2011). The primary data sought were characteristic data regarding attitudinal loyalty to METRO Department Store customers in Surabaya. The second part contains questionnaire statements regarding the effect of post-transaction service, direct mail, interpersonal communication, merchandise, preferential treatment, store atmosphere, on attitudinal loyalty through perceived relationship investment, and perceived relationship quality on METRO Department Store customers in Surabaya. Secondary data is data that is not collected by researchers themselves. Secondary data in this study were obtained by the literature study method, namely data obtained from the literature related to the main problem of this study. Population is a generalization area consisting of certain qualities and characteristics that the researcher determines to study and draw conclusions (Sugiyono in Sarwono, 2010). From this understanding, it can be understood that the population is an area that is determined to be researched by studying and drawing conclusions from the research results. In this case, the population used is customers who make purchases at METRO Department Stores in Surabaya. Judging from the number, the population to be used in this study is included in the population category with an unknown number, namely a population consisting of elements that are difficult to find boundaries. The population used is METRO Department Store customers in Surabaya. The sampling method used in this research is non-probability sampling. This study uses a questionnaire as the main tool in data collection. In this study, researchers will use a

snowball sampling technique, where the researcher selecting respondents who will help researchers to distribute and fill out questionnaires. The application of the snowball sampling technique in this study was carried out by distributing questionnaires to be distributed to METRO Department Store customers in Surabaya who had purchased at the selected store as the sample. The area used as a place for distributing questionnaires is the city of Surabaya, so that the selected respondents are in accordance with what is expected.

4. Results and Discussion

4.1 Hypotheses Testing

Table 4.1: Multiple Regression Effects of Post Transaction Service, Direct Mail, Interpersonal Communication, Merchandise, Preferential Treatment, Store Atmosphere toward Perceived Relationship Investment.

4.2 Discussion

4.2.1 The effect of Post Transaction Service toward Perceived Relationship Investment

Based on SPSS analysis result, estimation parameters between the Post Transaction Service Toward Perceived Relationship Investment, Direct Mail Toward Perceived Relationship Investment, Interpersonal Communication Toward Perceived Relationship Investment, Merchandise Toward Perceived Relationship Investment, Preferential Treatment Toward Perceived Relationship Investment, Store Atmosphere Toward Perceived Relationship Investment, Store Atmosphere Toward Perceived Relationship Investment, Perceived Relationship Investment Toward Perceived Relationship Quality, and Perceived Relationship Quality Toward Attitudinal Loyalty has a significant relationship because t_{sig} values below 0,05. it can be said that hypothesis H1, H2, H3, H4, H5, H6, H7, and H8 were accepted. The results exhibited that all the hypothesized variables played important roles in predicting Attitudinal Loyalty to METRO Department Store on Surabaya. The findings of this study provide several important implications for Attitudinal Loyalty research and practice, especially in retail industry in the future.

4.2.2 The effect of Post Transaction Service toward Perceived Relationship Investment

The estimation parameters between Post Transaction Service and Perceived Relationship Investment show significant results in a positive direction with a value of t test where the significance is 0.005 (below 0.05) which indicates that this hypothesis is accepted. Post Transaction Service is one of the more extra shop services that are usually offered to customers. The added impression after providing this service affects the customer's impression of the shop. A positive impression can strengthen the customer relationship with the shop. The result of this research is that METRO Department Store in Surabaya improves post-transaction services by making product return procedures easier with appropriate product exchange services, and increasing the knowledge of sales staff about product exchange procedures through training or training.

4.2.3 The effect of Direct Mail toward Perceived Relationship Investment

The estimation parameters between Direct Mail and Perceived Relationship Investment show significant results in a positive direction with a value of t test where the significance is 0.002 (below 0.05) which indicates that this hypothesis is accepted. Direct Mail as a marketing tool to increase customer purchasing frequency. Because the higher the frequency of customers responding to messages sent, the potential for increasing the frequency of customer purchases will be even greater. Thus, Direct Mail is consistently used to increase Customer Relationship Investment. This study suggests that METRO Department Store in Surabaya improves Direct Mail by regularly sending product catalogs, updates, and event brochures by e-mail in a more creative and attractive way for METRO Department Store customers in Surabaya.

4.2.4 The effect of Interpersonal Communication toward Perceived Relationship Investment

The estimation parameters between Interpersonal Communication and Perceived Relationship Investment show significant results in a positive direction with a value of t-test where if $Sig. \leq 0.05$, the hypothesis is accepted. Sig. Interpersonal Communication Value 0.003, standard value 0.05, hypothesis is accepted. Interpersonal Communication as the key to a strong Perceived Relationship Investment. By creating intimacy between customers and salespeople, personal relationships can be developed through the attention shown by the seller. These efforts will generate trust from customers in the store. All department stores in

Surabaya use the same benchmark method, namely the Service Quality Index (SQI) where interpersonal communication is included as one of the assessments. Thus, a department store serving the same market segment as METRO Department Store, the upper middle class segment such as Sogo has the same interpersonal communication standards in handling customers. In it concerns the ways and skills of salespeople in providing services to customers. For example, how salespeople communicate or explain product knowledge to customers in a creative way, and explore what customers need so that customers will be interested in buying at METRO Department Store in Surabaya.

4.2.5 The effect of Merchandise toward Perceived Relationship Investment

The estimation parameters between Merchandise and Perceived Relationship Investment show significant results in a positive direction with a value of t-test where if $\text{Sig.} \leq 0.05$, the hypothesis is accepted. Sig. Interpersonal Communication Value 0.000, standard value 0.05, hypothesis is accepted. There is an influence of Merchandise on building Perceived Relationship Investment which is expressed through customer satisfaction and loyalty. Store-sold products are considered as the most important antecedents that influence customer-store relationships to generate customer loyalty.

4.2.6 The effect of Preferential Treatment toward Perceived Relationship Investment

The estimation parameters between Preferential Treatment and Perceived Relationship Investment show significant results in a positive direction with a value of t test where the significance is 0.042 (below 0.05) which indicates that this hypothesis is accepted. The focus of preferential treatment builds a long-term relationship between the customer and the store by offering additional benefits to multiple customers. This research results that METRO Department Store in Surabaya improves their preferential treatment by increasing extra services for regular customers (members) by providing more special promotions, then METRO Department Store in Surabaya can improve its services in providing information to regular customers (members).

4.2.7 The effect of Store Atmosphere toward Perceived Relationship Investment

The estimation parameters between Store Atmosphere and Perceived Relationship Investment show significant results in a positive direction with a value of t-test where the significance is 0.042 (below 0.05) which indicates that this hypothesis is accepted. Where the shopping experience at the store greatly affects the relationship between customers and the store, therefore increasing the shop atmosphere will significantly affect Perceived Relationship Investment. Spence et al. (2012) stated that the interaction between the customer and the shop atmosphere has a psychological impact on the customer experience and triggers a shared value creation process, which is called the relationship construct. This research shows that METRO Department Store in Surabaya can improve the shop atmosphere by creating a more attractive appearance and tenant decoration so that it can attract targeted customers, METRO can also improve customer space management and tenant placement arrangement based on product category.

4.2.8 The effect of Perceived Relationship Investment toward Perceived Relationship Quality

The estimation parameters between Perceived Relationship Investment and Perceived Relationship Quality show significant results in a positive direction with a value of t-test where the significance is 0.000 (below 0.05) which indicates that this hypothesis is accepted. Communication efforts in building relationships have an impact on the relational construct by having a positive relationship quality. This study results that METRO Department Store in Surabaya increases Perceived Relationship Investment by offering more promotional programs, additional services, and events related to building relationships with regular customers (members).

4.2.9 The effect of Perceived Relationship Quality toward Attitudinal Loyalty

The estimation parameters between Perceived Relationship Quality and Attitudinal Loyalty show significant results in a positive direction with a value of t test where the significance is 0.000 (below 0.05) which indicates that this hypothesis is accepted. direct influence on the willingness to provide recommendations to

others based on the relationship with the company. Behavior in having commitment and providing recommendations is interpreted as an attitude of loyalty. This research suggests that METRO Department Store in Surabaya improves the perception of relationship quality by ensuring that customers are happy with the shop and customer relationship, customers develop a sense of trust, and customers have trusted METRO Department Store in Surabaya as the right place to shop.

5. Conclusion

This study provides evidence that the Post Transaction Service affected Perceived Relationship Investment, Direct Mail affected Perceived Relationship Investment, Interpersonal Communication affected Perceived Relationship Investment, Merchandise affected Perceived Relationship Investment, Preferential Treatment affected Perceived Relationship Investment, Store Atmosphere affected Perceived Relationship Investment, Perceived Relationship Investment affected Perceived Relationship Quality, and Perceived Relationship Quality affected Attitudinal Loyalty.

Table 5.1: Managerial Implications

Current Research	Managerial Implications
Merchandise significantly affected Perceived Relationship Investment	<ol style="list-style-type: none"> 1. Following market trends, for example expanded product variations to keep up with the latest trends such as hype beast products. 2. Creating innovation by understanding current trends, such as creating new product categories on environmental care and eco products. 3. Strict and regular inventory checks to ensure product quality.
Store Atmosphere significantly affected Perceived Relationship Investment	<ol style="list-style-type: none"> 1. Create new innovations in decoration and appearance and arrangement of tenants. 2. Set the store arrangement with a new system, which can add visual appeal to customers. 3. Create a dedicated space for product sales during a major sale. Renting a hall at a shopping mall can be an option to increase space in the shop.
Interpersonal Communication significantly affected Perceived Relationship Investment	<ol style="list-style-type: none"> 1. Ongoing training to remind staff of the vision and mission and values of METRO's customer service department. 2. Skills development to improve communication skills, such as presentation skills to make them appear more convincing and ethical. 3. Creating a platform for customer reviews or assessments related to services at METRO Department Store in Surabaya.
Post Transaction Service significantly affected Perceived Relationship Investment	<ol style="list-style-type: none"> 1. Create an integrated Post Transaction Service feature in the METRO membership mobile application, where customers submit post-transaction service requests, such as product exchange services or product returns. 2. Improved post-transaction service SOPs by shortening waiting times. 3. Providing regular provision and training

	regarding post-transaction service procedures.
Direct Mail significantly affected Perceived Relationship Investment	<ol style="list-style-type: none"> 1. Improve email content, such as adding tips and tricks in styling. 2. Create an attractive e-mail display to attract customers to read, such as METRO can write interesting headlines. 3. Increase e-mail as a marketing tool by creating an exclusive impression, such as special invitations for events held for members.
Preferential Treatment significantly affected Perceived Relationship Investment	<ol style="list-style-type: none"> 1. Create extra sales promotion programs, such as additional special discounts for customers who have members. 2. Creating extra programs and services that give a special feeling to customers who have members, such as additional sales promotions. 3. When transacting with METRO employees, employees will explain more information about the benefits of being a member, promotions, events that may be attended by members, which are not accepted by non-member customers.
Perceived Relationship Investment significantly affected Perceived Relationship Quality	<ol style="list-style-type: none"> 1. Offering special extra services dedicated to those who have members. 2. Provide reward points for METRO Department Store members for every purchase, and give extra cashback of 30% (max. Cashback of IDR 150,000) for new members who have been registered so that they can attract more customers to join the loyalty membership. 3. Giving priority invitations to METRO Department Store members during a premium brand launch event.
Perceived Relationship Quality significantly affected Attitudinal Loyalty	<ol style="list-style-type: none"> 1. Give gifts to customers who shop more than minimum spend, to increase the enthusiasm for shopping at METRO Department Store Surabaya. 2. Develop a training program for METRO employees to provide reliable and reliable information to customers. 3. Hold seasonal promotions during special events held every year, such as Christmas, Chinese New Year, Idul Fitri where METRO also sells special products.

5.1 Recommendation

Looking at the results of existing research where there are still many limitations to the research conducted by the author, the recommendations that can be submitted by the author are as follows:

- Seeing the limitations regarding the research object that only takes respondents, namely METRO Department Store customers in Surabaya, it is hoped that the next research using the same or modified model can be applied to different objects to get more general results on the factors that

affect Attitudinal Loyalty.

- Further research is expected to complement the existing variables in this research so that it can further enhance the understanding of the factors that affect Attitudinal Loyalty. for example, further research adds the variable word of mouth and others.
- Further research can be developed by linking the factors that influence Attitudinal Loyalty based on income level, age, and gender. Future research could also expand the scope of respondents to be researched, or carry out their research in a different area from the current research. So that the further research carried out provides a broad picture of Attitudinal Loyalty.
